# PowerShell Commands Cheat Sheet

#### PowerShell - Files and Folders

Task	Command	Example
Creating Folders	New-Item -ItemType Directory <foldername></foldername>	New-Item -ItemType Directory "C:\NewFolder"
Creating Files	New-Item -ItemType File <filename></filename>	New-Item -ItemType File "C:\test.txt"
Copying Folders	Copy-Item -Path <source/> -Destination <dest> -Recurse</dest>	Copy-Item -Path "C:\Folder1" -Destination "D:\Backup" -Recurse
Copying Files	Copy-Item <sourcefile> <destination></destination></sourcefile>	Copy-Item "C:\file.txt" "D:\backup.txt"
Deleting Folders	Remove-Item -Path <foldername> -Recurse -Force</foldername>	Remove-Item -Path "C:\OldFolder" -Recurse -Force
Deleting Files	Remove-Item <filename></filename>	Remove-Item "C:\test.txt"
Moving Folders	Move-Item <sourcefolder> <destination></destination></sourcefolder>	Move-Item "C:\Folder1" "D:\NewLocation"
Moving Files	Move-Item <sourcefile> <destination></destination></sourcefile>	Move-Item "C:\test.txt" "D:\backup.txt"
Rename Folders	Rename-Item <oldname> <newname></newname></oldname>	Rename-Item "C:\OldFolder" "C:\NewFolder"
Rename Files	Rename-Item <oldname> <newname></newname></oldname>	Rename-Item "C:\old.txt" "C:\new.txt"
Retrieving Item	Get-Item <path></path>	Get-Item "C:\file.txt"
Check Folder Existence	Test-Path <foldername></foldername>	Test-Path "C:\Users" (Returns \$true or \$false)
Check File Existence	Test-Path <filename></filename>	Test-Path "C:\test.txt"

### PowerShell - Dates and Timers

Task	Command	Example
Get System Date	Get-Date	Get-Date (Displays current date & time)
Set System Date	Set-Date -Date " <mm dd="" yyyy="">"</mm>	Set-Date -Date "02/18/2025"
Get System Time	(Get-Date). Time Of Day	(Get-Date).TimeOfDay
Set System Time	Set-Date -Date " <mm dd="" hh:mm="" yyyy="">"</mm>	Set-Date -Date "02/18/2025 14:30"

#### PowerShell - Files I/O

Task	Command	Example
Create Text File	New-Item -ItemType File <filename></filename>	New-Item-ItemType File "C:\test.txt"
Read Text File	Get-Content <filename></filename>	Get-Content "C:\test.txt"
Create XML File	[xml]\$xml = " <root></root> "; \$xml.Save(" <filename>")</filename>	[xml]\$xml = " <root></root> "; \$xml.Save("C:\data.xml")
Read XML File	[xml]\$xml = Get-Content <filename></filename>	[xml]\$xml = Get-Content "C:\data.xml"
Create CSV File	New-Item -ItemType File <filename>.csv</filename>	New-Item -ItemType File "C:\data.csv"
Read CSV File	Import-Csv <filename></filename>	Import-Csv "C:\data.csv"
Create HTML File	New-Item -ItemType File <filename>.html</filename>	New-Item-ItemType File "C:\index.html"
Read HTML File	Get-Content <filename>.html</filename>	Get-Content "C:\index.html"
Erasing File Content	Set-Content <filename> ""</filename>	Set-Content "C:\test.txt" ""
Append Text Data	Add-Content <filename> "Text"</filename>	Add-Content "C:\test.txt" "Hello World!"

#### PowerShell - Advanced Cmdlets

Cmdlet	Description	Example
Get-Unique	Get unique values from input	`Get-Content file.txt
Group-Object	Group objects by property	`Get-Process
Measure-Object	Perform calculations on objects	`Get-ChildItem
Compare-Object	Compare two sets of objects	Compare-Object (Get-Content File1.txt) (Get-Content File2.txt)
Format-List	Format output as a list	`Get-Service
Format-Wide	Format output in columns	`Get-Command
Where-Object	Filter output	`Get-Process
Get-ChildItem	Get files & directories	Get-ChildItem "C:\Users"
ForEach-Object	Iterate through each object	`Get-Process
Start-Sleep	Pause script execution	Start-Sleep -Seconds 5
Read-Host	Prompt user for input	\$name = Read-Host "Enter your name"
Select-Object	Select specific properties	`Get-Process
Sort-Object	Sort output	`Get-Process
Write-Warning	Display warning message	Write-Warning "Low disk space!"
Write-Host	Print output	Write-Host "Hello, World!" -ForegroundColor Green

Invoke-Item	Open a file or folder	Invoke-Item "C:\test.txt"
Invoke-Expression	Run a command string	Invoke-Expression "Get-Process"
Measure-Command	Measure execution time	Measure-Command { Get-Process }
Invoke-History	Run a command from history	Invoke-History 3
Add-History	Add command to history	Add-History -InputObject "Get-Process"
Get-History	Show command history	Get-History
Get-Culture	Get system language settings	Get-Culture

## Getting Help

Task	Command	Example
Get help for a command	Get-Help <cmdlet></cmdlet>	Get-Help Get-Service
Show examples	Get-Help <cmdlet> -Examples</cmdlet>	Get-Help Get-Process -Examples
Show detailed help	Get-Help <cmdlet> -Detailed</cmdlet>	Get-Help Get-Service -Detailed
List available commands	Get-Command	Get-Command
Find cmdlets by keyword	Get-Command *service*	Get-Command *disk*

## System Information

Task	Command	Example
Get system information	Get-ComputerInfo	Get-ComputerInfo
Get OS details	Get-WmiObject Win32_OperatingSystem	Get-WmiObject Win32_OperatingSystem
Get system manufacturer	Get-WmiObject Win32_ComputerSystem	Get-WmiObject Win32_ComputerSystem
List running processes	Get-Process	Get-Process
List installed updates	Get-Hotfix	Get-Hotfix

### File and Folder Management

Task	Command	Example
List files/folders	Get-ChildItem <path></path>	Get-ChildItem C:\Users
Create a file	New-Item -ItemType File <filename></filename>	New-Item -ItemType File "C:\test.txt"
Create a folder	New-Item -ItemType Directory <foldername></foldername>	New-Item-ItemType Directory "C:\NewFolder"
Copy a file	Copy-Item <source/> <destination></destination>	Copy-Item "C:\file.txt" "D:\backup.txt"
Move a file	Move-Item <source/> <destination></destination>	Move-Item "C:\file.txt" "D:\backup.txt"
Delete a file	Remove-Item <filename></filename>	Remove-Item "C:\test.txt"
Delete a folder	Remove-Item <foldername> -Recurse -Force</foldername>	Remove-Item "C:\OldFolder" -Recurse -Force

## User and Group Management

Task	Command	Example
List local users	Get-LocalUser	Get-LocalUser
Create a new user	New-LocalUser -Name <username> -Password <securestring></securestring></username>	New-LocalUser -Name "TestUser" -Password (ConvertTo-SecureString "P@ssword123" -AsPlainText -Force)
Delete a user	Remove-LocalUser -Name <username></username>	Remove-LocalUser -Name "TestUser"
List local groups	Get-LocalGroup	Get-LocalGroup
Add user to a group	Add-LocalGroupMember -Group <group> -Member <user></user></group>	Add-LocalGroupMember -Group "Administrators" -Member "TestUser"

## Networking

Task	Command	Example
Get IP address	Get-NetIPAddress	Get-NetIPAddress
Ping a host	Test-Connection <host></host>	Test-Connection google.com
Get network adapter info	Get-NetAdapter	Get-NetAdapter
Show active connections	Get-NetTCPConnection	Get-NetTCPConnection
Resolve a DNS name	Resolve-DnsName <domain></domain>	Resolve-DnsName google.com

# Managing Processes & Services

Task	Command	Example
List running processes	Get-Process	Get-Process
Kill a process	Stop-Process -Name <processname> -Force</processname>	Stop-Process -Name "notepad" -Force

Start a process	Start-Process < AppName >	Start-Process "notepad.exe"
List all services	Get-Service	Get-Service
Start a service	Start-Service -Name <servicename></servicename>	Start-Service -Name "wuauserv"
Stop a service	Stop-Service -Name <servicename></servicename>	Stop-Service -Name "wuauserv"
Restart a service	Restart-Service -Name <servicename></servicename>	Restart-Service -Name "wuauserv"

### Windows Updates

Task	Command	Example
Check for updates	Get-WindowsUpdate	Get-WindowsUpdate
Install updates	Install-WindowsUpdate -AcceptAll	Install-WindowsUpdate -AcceptAll

### Disk Management

Task	Command	Example
List all volumes	Get-Volume	Get-Volume
List all disks	Get-Disk	Get-Disk
Show partitions	Get-Partition	Get-Partition
Wipe a disk (Caution!)	Clear-Disk -Number < DiskNumber > -Confirm: \$false	Clear-Disk -Number 1 -Confirm:\$false

#### Task Scheduler

Task	Command	Example
List scheduled tasks	Get-Scheduled Task	Get-ScheduledTask
Create a new task	Register-ScheduledTask -TaskName "MyTask" -Trigger (New- ScheduledTaskTrigger -At 12:00PM -Daily) -Action (New- ScheduledTaskAction -Execute "notepad.exe") -User "SYSTEM" - RunLevel Highest -Force	

### Security & Permissions

Task	Command	Example
Check execution policy	Get-ExecutionPolicy	Get-ExecutionPolicy
Set execution policy	Set-ExecutionPolicy RemoteSigned	Set-ExecutionPolicy RemoteSigned

## Active Directory (For Domain Admins)

Task	Command	Example
Get all AD users	Get-ADUser -Filter *	Get-ADUser -Filter *
Create an AD user	New-ADUser -Name "John Doe" -SamAccountName jdoe - UserPrincipalName jdoe@domain.com -Path "OU=Users,DC=domain,DC=com" -Enabled \$true	
Delete an AD user	Remove-ADUser -Identity jdoe	Remove-ADUser -Identity jdoe

#### **Remote Sessions**

Task	Command	Example
Start a remote session	Enter-PSSession -ComputerName <server></server>	Enter-PSSession -ComputerName Server01
Run a command remotely	Invoke-Command -ComputerName <server> -ScriptBlock { Get- Service }</server>
